John Doe

Senior Backend Engineer | AI Specialist

SUMMARY:

Highly motivated Senior Backend Engineer with 6 years of experience building scalable Python APIs. Strong focus on AI integration and deterministic workflows.

SKILLS:

- Languages: Python, JavaScript, SQL
- Frameworks: FastAPI, Flask, React
- AI/ML: OpenAI API, LangChain, LangGraph basics
- Databases: PostgreSQL, SQLite, MongoDB

EXPERIENCE:

Software Engineer III at TechNova (2022 - Present)

- Designed and implemented high-throughput REST APIs using FastAPI and Pydantic.
- Built internal AI agent prototypes using LangChain to automate data entry tasks.
- Familiar with LangGraph for simple node-based workflows, though primarily relied on AutoGPT for open-ended reasoning.
- Implemented polling-based communication between frontend React and backend AI models.
- Note: Did not use WebSockets or SSE for real-time streaming, relied strictly on traditional HTTP request/response loops.

Backend Developer at CodeStream (2018 - 2022)

- Maintained legacy Django monolithic applications.
- Optimized slow SQL queries on large relational databases.
- Integrated third-party APIs for payment processing and email notifications.

EDUCATION:

B.S. in Computer Science - State University (2014 - 2018)
